## ACMA SHOWS CUSTOMER-CENTRIC SOLUTIONS AT PACK EXPO

15 August 2018

**ACMA, a Coesia Group company, will be participating in the Chicago trade fair to strengthen its position on the North American market, particularly in the Confectionery industry.** The company will be exhibiting its CW 800 R horizontal packaging machine for spherical chocolates, a model that is already very popular with customers and equipped with a new-generation operator panel.

### **ACMA in North America: tradition, flexibility and innovation**

ACMA draws on the power of a know-how unrivalled anywhere in the world, both specifically in the Confectionery industry – in which the company has almost a century of experience – and in packaging design for tea, soap bars and liquid detergents. The Italian company offers flexible, scalable solutions that can be adapted to a great variety of packaging needs for both liquid and solid products of different shapes, quantities and types. At the same time, the company works with customers right from the preliminary stages of a project, including the identification of the most suitable form of packaging for the customer's specific target market. This customer-centric orientation has been reinforced in recent years to become one of the most important keys to the company's business. This means making the technology behind its machinery simpler and more accessible, with a focus on sustainability and financial savings.

### **Increasingly customer-centric, starting with the interface**

One significant step in this direction is the world premiere of ACMA's new operator panel, which will be demonstrated on the CW 800 R exhibited in Chicago. Designed to simplify machine operation, the CW 800 R operator panel features advanced functions to enable simple, intuitive use such as machine diagnostics and the replacement of machine parts. This is a complementary application to the ARA – Advanced Remote Assistance – system that comes as standard on all ACMA units made since 2015 and enables quick, easy remote intervention by specialised staff.

The Coesia Group's approach to innovation and industry 4.0 is further demonstrated by its implementation of services such as the "Coesia Web Shop", making it quick and easy to order parts via a dedicated platform similar to the portals we all use to make personal online purchases every day. Behind this simple, practical interface lies a complex system that enables effective machine maintenance support over time.

#### PROCESSING INNOVATION

## ACMA to debut HMI display on flat-base chocolate packaging machine at Pack Expo

By Jenny Eagle

16-Oct-2018 - Last updated on 16-Oct-2018 at 15:23 GMT

1 COMMENT

ACMA's latest HMI display. Photo: ACMA.

RELATED TAGS: Innovation, processing, Packaging

**ACMA has launched a HMI display, which it will debut on its CW 800 R packaging machine for flat-base chocolates, at Pack Expo.**

The operator panel (HMI), featuring touchscreen technology, is designed to guide the user through all processes, from everyday machine operation to periodic maintenance and ordering replacement parts.

#### Video tutorials

The display can interact with the operator visually through images and video, making the panel quick and easy to use, which is ideal for quick-change pack formats, which can be explained in video tutorials customised by machine version and by the type of product to be packaged.

A spokesman for ACMA, part of Coesia Group, said the HMI is the 'electronic brain' of the machine: using hardware that monitors the machine's operating data, detecting when any parameters are out of scale and automatically making adjustments to optimize production flow.

The panel also uses a predictive approach, anticipating the need for certain interventions and routine maintenance activities.

#### Real-time data

The machine is constantly connected and relays real-time activity data, for production efficiency.

The operator panel will be presented at Pack Expo in Chicago from October 14-17.

## Acma to release new packaging upgrades to its equipment at Pack Expo

**Posted:** 12 October 2018

**Related core topics:** Business news, Cocoa & chocolate, New products, Packaging, Processing

**Related topics:** Acma, digital services, HMI, innovation, packaging, Processing

**Related organisations:** Acma, Coesia, Pack Expo

**Related regions:** europe, italy, US, worldwide

An expanded range of digital control upgrades will be showcased by Italian-based manufacturer Acma at Pack Expo next week in Chicago, US.

The company's latest systems have been developed to improve its series of packaging machinery used within the confectionery and bakery sectors.

Among the key features of its latest digital services is a new operator panel (HMI) that combines simplified machine operation with optimised productivity through constant performance monitoring.

The company, which is part of the Coesia group, will be demonstrating the upgraded systems at Pack Expo with its CW 800 R packaging machine for flat-base chocolates.

One of the central features of the enhanced operating system is its touchscreen technology, designed to guide the user through all processes, from everyday machine operation to periodic maintenance and the ordering of replacement parts.

Interaction with the operator is highly visual through the enhanced use of images and video, making the panel quick and intuitive to master. This is especially useful during operations to change pack formats, which can be explained in video tutorials customised by machine version and by the type of product to be packaged.

The new HMI is not just a control interface but also the "electronic brain" of the machine: using its state-of-the-art hardware it constantly monitors the machine's operating data, detecting when any parameters are out of scale and automatically making adjustments as necessary to optimise production flow.

In addition, the panel also uses a predictive approach, with the ability to anticipate the need for certain interventions and thus further facilitate routine maintenance activities. The machine is constantly connected and relays real-time activity data, for improving production efficiency.

Acma will be exhibiting at the Pack Expo trade show in Chicago from 14-17 October, at the Coesia booth S-2501

## ACMA PRESENTS SOLUTIONS TO MAXIMISE MACHINERY PRODUCTIVITY

12 October 2018

**ACMA, a Coesia Group company, presents an updated range of services to maximise the productivity of its machinery.**

This is a new concept in customer support based around digital, user-friendly tools and materials. The new operator panel, a preview of which will be presented at the Pack Expo trade show in Chicago, is an advanced tool that combines simplified machine operation with optimised productivity through constant performance monitoring.

The new operator panel (HMI), featuring touchscreen technology, uses a totally user-friendly approach. The panel is designed to guide the user through all processes, from everyday machine operation to periodic maintenance and the ordering of replacement parts. Interaction with the operator is highly visual through the enhanced use of images and video, making the panel quick and intuitive to master. This is especially useful during operations to change pack formats, which can be explained in video tutorials customised by machine version and by the type of product to be packaged.

The new HMI is not just a control interface but also the “electronic brain” of the machine: using its state-of-the-art hardware it constantly monitors the machine’s operating data, detecting when any parameters are out of scale and automatically making adjustments as necessary to optimise production flow. The new panel also uses a predictive approach, with the ability to anticipate the need for certain interventions and thus further facilitate routine maintenance activities. The machine is constantly connected and relays real-time activity data, for superior production efficiency. In Chicago the new HMI will be displayed on the CW 800 R packaging machine for flat-base chocolates.

ACMA will be exhibiting at the Pack Expo trade show in Chicago from 14 to 17 October, Coesia booth S-2501

PRESS REVIEW

## Servizi digitali che ottimizzano le prestazioni

Il nuovo pannello operatore Acma semplifica la conduzione delle macchine, massimizzandone la produttività, grazie a un costante monitoraggio delle performance.

Per supportare il cliente con strumenti digitali in grado di ottimizzare la produttività dei propri macchinari, **Acma (Gruppo Coesia)** estende l'offerta di servizi, proponendo un **nuovo pannello operatore (HMI) dotato di tecnologia touch, che offre un approccio completamente user friendly.**

La soluzione, presentata in anteprima alla fiera Pack Expo di Chicago, è progettata in modo da guidare l'utente in tutte le operazioni, dalla conduzione quotidiana della macchina, fino alla manutenzione periodica e all'ordine di parti di ricambio.

L'interazione con l'operatore è quanto più possibile visiva, basata su immagini e video, in modo da essere immediata e intuitiva. Questo risulta particolarmente utile nel caso delle operazioni di cambio formato, che possono essere illustrate attraverso video tutorial, personalizzati a seconda del modello della macchina e della tipologia di prodotto da confezionare. Il nuovo HMI non è solo uno strumento per il controllo, ma funge anche da "cervello elettronico" della macchina. Grazie a un hardware particolarmente evoluto, ne monitora costantemente gli indici di funzionamento, rilevando eventuali parametri fuori scala ed eseguendo in autonomia gli adeguamenti necessari a ottimizzare il flusso produttivo.

Il pannello, inoltre, opera secondo un approccio predittivo, riuscendo ad anticipare alcuni interventi, in modo da rendere le attività di manutenzione ordinaria ancora più agevoli. La macchina è costantemente connessa e comunica in tempo reale i dati di attività, garantendo, così, la migliore efficienza produttiva.

## Digital services to optimize performance

The new Acma operator panel simplifies machine operation and maximizes productivity, thanks to constant performance monitoring.

In order to support customers with digital, user-friendly tools designed to maximise the productivity of its machinery, **ACMA (Coesia Group)** extends the range of services by proposing a new operator panel (HMI) featuring touchscreen technology, with a totally user-friendly approach.

Presented at the Pack Expo trade show in Chicago, the panel is designed to guide the user through all processes, from everyday machine operation to periodic maintenance and the ordering of replacement parts.

Interaction with the operator is highly visual through the enhanced use of images and video, making the panel quick and intuitive to master. This is especially useful during operations to change pack formats, which can be explained in video tutorials customised by machine version and by the type of product to be packaged.

## ACMA to showcase innovative packaging solutions

ACMA will present a blend of historical and contemporary technologies at ProSweets 2019 in Cologne, enabling visitors to try out the functions of the new operator interface and to immerse themselves in an interactive experience.

Print Email Share

At Cologne **ACMA** will present its new operator panel (Web HMI), a revolutionary approach to machine interaction and management. The new panel guides the user through all operations in an intuitive and user-friendly way, from day-to-day machine operation to maintenance and format changeover. It allows for real-time intervention (Advanced Remote Assistance) by ACMA's team of experts to perform diagnostics and fast troubleshooting. In addition, it constantly monitors the machine's operational parameters to optimize the production flow settings, ensuring maximum efficiency, and keeping downtimes to a minimum.
